Barking or howling

If your dog barks during the day or at night we will take measures to combat this by either walking again playing with etc. If your dog continues to bark or howl we will put a bark collar on your dog. How it works. At the first bark, the Bark collar applier a short warning tone, if a second bark occurs within the thirty seconds, a more intense tone is sounded along with a short mild shock. If your dog barks a third time, both the tone and shock are made more intense. Until your pet stops for thirty seconds, the collar automatically resets to the first "tone only" level of correction.
